

## Project Design Phase-II

### Solution Requirements (Functional & Non-functional)

|               |                                                                     |
|---------------|---------------------------------------------------------------------|
| Date          | 5 September 2026                                                    |
| Team ID       | Individual                                                          |
| Name          | Noshma Chowdary Uppuluri                                            |
| Project Name  | Employee Raise Issue – Record Producer & Service Portal Integration |
| Maximum Marks | 4 Marks                                                             |

#### Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic)         | Sub Requirement (Story / Sub-Task)                                                                                                                                                              |
|--------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Employee Issue Submission             | Provide an Employee Center/Service Portal option for employees to raise workplace or technical issues. Employee enters the required issue details and submits the request.                      |
| FR-2   | Issue Data Collection & Validation    | Capture requester, category, subcategory, short description and other required information. Use UI Policies to enforce mandatory fields and control field behavior.                             |
| FR-3   | Dynamic Categorization                | Allow employees to select an issue category and display the relevant subcategory based on the selected category. Ensure appropriate choices are available during submission.                    |
| FR-4   | Issue Record Creation                 | Automatically create an employee issue record from the submitted information. Store issue details such as requester, category, subcategory, description, state, priority and assignment group.. |
| FR-5   | Issue Assignment & Management         | Allow support/admin users to assign issues to the appropriate support group, update priority and manage the issue throughout its lifecycle.                                                     |
| FR-6   | Issue Tracking & Status Management    | Allow employees and authorized users to track the issue status. Support status updates such as New, In Progress, Resolved and Closed.                                                           |
| FR-7   | Portal & Widget Access                | Provide custom Employee Center widgets and portal components for quick access to issue submission, issue information and relevant self-service options.                                         |
| FR-8   | <b>Issue Resolution &amp; Closure</b> | Allow the support team to update resolution details and close the issue after the problem has been resolved.                                                                                    |

#### Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| NFR No. | Non-Functional Requirement | Description                                                                                                                                           |
|---------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1   | <b>Usability</b>           | The Employee Center and issue submission form should be simple, clear and easy for employees to use.                                                  |
| NFR-2   | <b>Security</b>            | Only authorized users should be able to access, create or manage employee issue records, roles and permissions.                                       |
| NFR-3   | <b>Reliability</b>         | The system should consistently create and maintain issue records without losing submitted information.                                                |
| NFR-4   | <b>Performance</b>         | Request submission, workflow execution, approval routing, and task creation should complete within an acceptable response time.                       |
| NFR-5   | <b>Availability</b>        | The Employee Center and issue management functionality should be available to employees and support users through the configured ServiceNow instance. |
| NFR-6   | <b>Scalability</b>         | The solution should support increasing numbers of employees, issue records, categories, subcategories and support groups without major redesign.      |
