Problem – Solution Fit Template

Date	15 February 2025
Team ID	Individual
Name	Noshma Chowdary Uppuluri
Project Name	Employee Raise Issue Management System using ServiceNow
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Problem-Solution fit

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Primary: employees of an organisation who face workplace / IT issues (network, software, hardware, access) and need to report them. Secondary: support team members / administrators who track and manage the resulting Employee Issue records in ServiceNow.	6. CUSTOMER CONSTRAINTS CC - Employees are not always technical, so they may not know how to classify an issue. - Limited time – an issue interrupts their work. - A web browser and network access are needed to reach the Employee Center portal. - The solution has to fit within the ServiceNow platform (demonstrated on instance dev402706).	5. AVAILABLE SOLUTIONS AS Typical alternatives to a portal-based form: Email / phone / verbal report to IT or a manager – quick, but unstructured, hard to track, easy to lose. Informal chat messages – fast, but no dedicated record or fixed categories. General ticketing forms – structured, but not tailored to this project's Category / Subcategory / State fields.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Jobs to be done - Report a workplace / IT issue quickly from one place. - Describe it in a consistent format (Requester, Category, Subcategory, State, Short Description). - Get the issue recorded so it can be followed up. Problems: reports scattered across channels, missing details, no central record.	9. PROBLEM ROOT CAUSE RC - No single, centralised entry point for raising issues. - Free-form reports leave out details such as category or requester. - Without a dedicated record, issues are hard to track and manage. - Employees are unsure which type of issue they are reporting (Network, Software, Hardware, Access).	7. BEHAVIOUR BE Typical current behaviour: email or call IT / a manager, or message a colleague, then follow up repeatedly for progress. Behaviour with the solution: - Open Employee Center → Raise an Issue → Raise Employee Issue - Enter Requester, Category, Subcategory, State and Short Description; add an attachment if required - Submit → an Employee Issue record is created	Focus on J&P, tap into BE, understand RC
Identify strong TR & EM	3. TRIGGERS TR - A sudden problem: VPN not connecting, laptop or server issue, software not working, forgotten password / access problem. - Being unable to continue work. - Seeing the Raise an Issue section on the Employee Center homepage.	10. YOUR SOLUTION SL Employee Raise Issue Management System using ServiceNow – implemented components: - Custom ServiceNow application with a custom Employee Raise Issue table. - Record Producer "Raise Employee Issue" whose variables map to table fields (Requester, Category, Subcategory, State, Short Description). - UI policies / dependencies for category / subcategory and field behaviour. - Employee Center-based Service Portal (Search, Raise an Issue, Quick Links, My Active Items, Recommended for You) with a custom Commercial Services widget (HTML, CSS/SCSS). Current scope: issue creation and record management. Future Enhancement (not implemented): automatic assignment, SLA management, notifications, Flow Designer workflow, automated state transitions, knowledge recommendations, dashboards, approvals, escalation.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE - Employee Center portal: https://dev402706.service-now.com/employee_request - Search, Raise an Issue, Raise Employee Issue form, attachment (if required), Quick Links, My Active Items.	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM Before: frustrated, unsure whom to contact, worried about delay. After (intended): reassured and more in control, because submission creates a ticket record (e.g. EMP0001004). Resolution itself is not automated in the current version.		8.2 OFFLINE - Existing offline channels: phone calls and in-person reports to IT staff or a manager. - The portal is intended to reduce reliance on these channels; it does not integrate with them.	

Problem – Solution Fit Summary (Implemented vs Future Enhancement)

The table below links each customer problem in the canvas to the part of the actual implementation that addresses it. Only features that have been built and tested are marked as Implemented.

Customer problem	How the project addresses it	Status
No single place to raise issues	Employee Center-based Service Portal with a Raise an Issue section and the Raise Employee Issue Record Producer.	Implemented
Unstructured, incomplete reports	Record Producer variables (Requester, Category, Subcategory, State, Short Description) mapped to the fields of the Employee Raise Issue table. Category, Subcategory and State are multiple-choice.	Implemented
No dedicated record of the issue	Submission creates an Employee Issue record in the custom Employee Raise Issue table (test record: EMP0001004).	Implemented
Category / subcategory dependencies	UI policies / dependencies configured on the Employee Issue form for category / subcategory and field behaviour.	Implemented
Communicating the service message	Custom Commercial Services widget ("Our Commercial Services") added to the Employee Center homepage. Its statements are informational display content.	Implemented
Automatic assignment, SLA, notifications, workflow, escalation, resolution notes, knowledge recommendations, dashboards, approvals	Not part of the current build. The project supports issue creation and record management only.	Future Enhancement
