

Project Design Phase Solution Architecture

Date	20 September 2026
Team ID	Individual
Name	Noshma Chowdary Uppuluri
Project Name	Employee Raise Issue Management System using ServiceNow
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

The system is a custom ServiceNow application delivered through an Employee Center-based Service Portal. Employees submit a structured issue form (the Raise Employee Issue Record Producer) and ServiceNow stores each submission as a record in a custom Employee Raise Issue table. Figure 1 on the next page shows the architecture.

Solution Architecture Diagram:

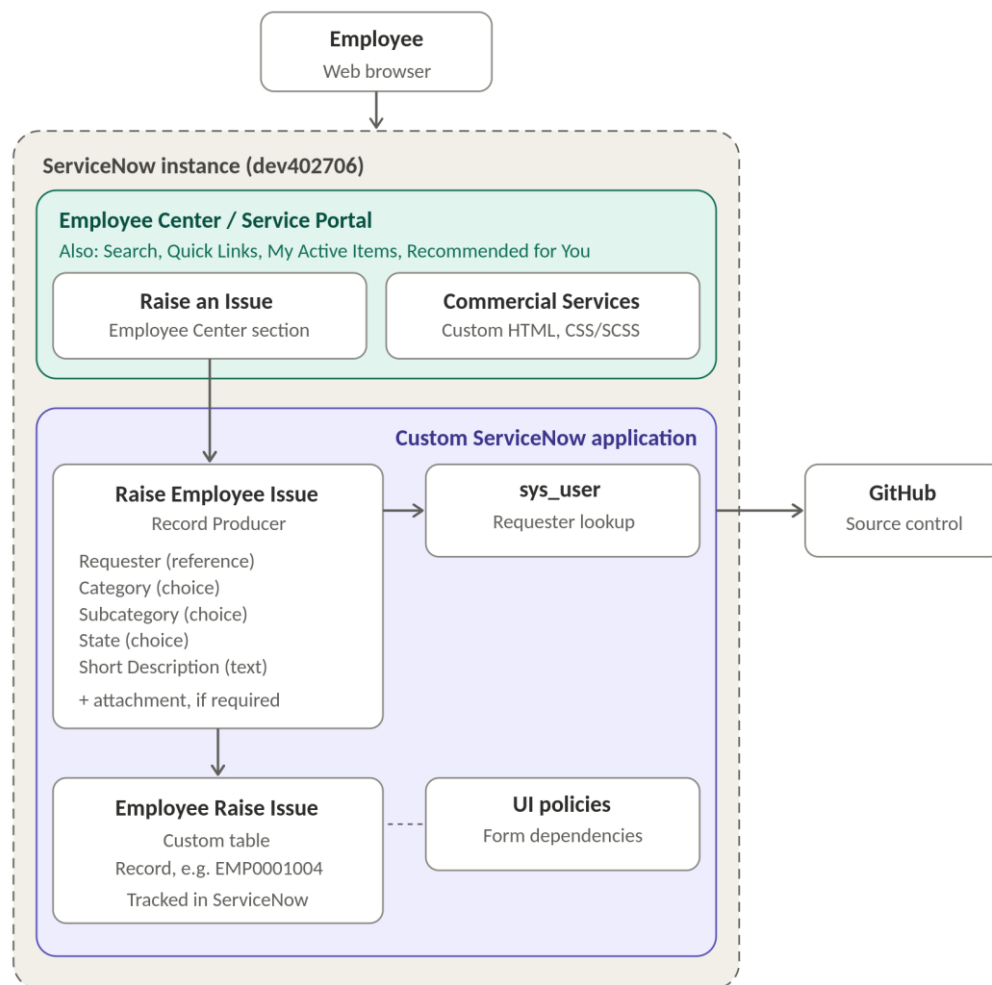

Figure 1: Solution architecture and data flow of the Employee Raise Issue Management System using ServiceNow

Components:

Component	Role in the solution	Status
Employee	End user who raises an issue through a web browser.	User
Employee Center / Service Portal	Employee Center-based Service Portal with Search, Raise an Issue, Raise Ticket, Quick Links, My Active Items and Recommended for You.	Implemented
Commercial Services widget	Custom Service Portal widget “Our Commercial Services” built with HTML and CSS and added to the portal homepage. It displays informational content only.	Implemented
Custom ServiceNow application	Application that holds the Record Producer, the custom table and the UI policies.	Implemented
Record Producer “Raise Employee Issue”	Form with five variables mapped to table fields: Requester, Category, Subcategory, State and Short Description. An attachment can be added if required.	Implemented
sys_user	ServiceNow user table referenced by the Requester variable.	Implemented
Employee Raise Issue table	Custom table that stores each submitted issue as a record. Test submission created ticket.	Implemented
UI policies	UI policies / dependencies configured on the Employee Issue form for category / subcategory and field behaviour.	Implemented
GitHub	The application was committed through ServiceNow’s source-control integration; the whole instance is not stored as ordinary source files.	Implemented
