

Project Development Phase

Project Testing & Validation

Date	20 September 2026
Team ID	Individual
Project Name	Employee Issue Management through a Custom ServiceNow Application and Service Portal
Maximum Marks	4 Marks

Employee Issue Management Testing:

The project shall validate the ServiceNow employee issue management solution from portal access and issue submission through record creation, UI policy enforcement, category/subcategory dependency, custom widget navigation, and end-to-end validation.

S.No.	Parameter	Values / Test Description	Expected Result	Actual Result	Pass/Fail
1	Custom Application	Verify that the Employee Center scoped application is created and available as the current application.	Employee Center opens successfully and the scoped application is available for configuration.	Pass – Employee Center scoped application created and accessible.	Pass
2	Custom Table	Open the Employee Raise Issue table and verify the configured fields and auto-numbering.	The table opens successfully and displays Number, Requester, Category, Subcategory, Short description, State, Priority, and Assignment Group.	Pass – Employee Raise Issue table and configured fields are available.	Pass
3	UI Policy – Mandatory Field	Change State to New and verify the Short description field behavior.	Short description becomes mandatory when State is New.	Pass – Short description becomes mandatory for New state.	Pass
4	UI Policy – Read Only	Open the Employee Raise Issue form and verify the Number field behavior.	Number remains read-only and cannot be manually edited.	Pass – Number field is read-only as configured.	Pass
5	Category / Subcategory Dependency	Select each Category and verify the corresponding Subcategory choices.	Network→VPN; Hardware→Laptop; Software→Server; Access→Forgot password.	Pass – Subcategory choices display according to Category.	Pass
6	Record Producer	Open Raise Employee Issue from the Service Portal and verify the configured variables.	The record producer opens successfully and displays the required issue-submission fields.	Pass – Record Producer opens with the configured variables.	Pass
7	Variable-to-Field Mapping	Enter valid issue details and submit the Record Producer.	Submitted values are mapped to the corresponding Employee Raise Issue fields.	Pass – Submitted values are mapped to the configured table fields.	Pass
8	Service Portal	Open the Requesting Portal using the employee_request URL and verify the portal configuration.	The portal loads successfully with its configured homepage, menu, logo/theme, and components.	Pass – Requesting Portal loads successfully.	Pass
9	Custom Widgets & Redirect	Verify both custom widgets and test the Raise Ticket action in the Link Redirect widget.	Both widgets are visible and Raise Ticket redirects to the Raise Employee Issue record producer.	Pass – Both widgets displayed and redirect worked successfully.	Pass
10	End-to-End Validation	Execute: portal → widget → Record Producer → submit issue → verify field rules and dependency.	The complete employee issue submission flow works without navigation, field, dependency, or configuration failures.	Pass – End-to-end issue submission and configured restrictions validated.	Pass
